BUDGIT® I-BEAM AND PATENTED TRACK TROLLEYS PUSH TYPE / HOOK SUSPENSION HAND GEARED / HOOK SUSPENSION 1/4 THRU 2 METRIC TON RATED LOADS

INSTRUCTIONS

These BUDGIT trolleys can be installed on I-beams or patented track as specified in chart below. Sufficient spacer washers are furnished with each trolley for the maximum flange width the trolley is designed to fit.

BEAM FLANGE WIDTHS THAT TROLLEYS WILL FIT

Rated Metric Load	Catalog Number	Minimum I-Beam Height (in)	Flange Widths (in)	
			Minimum	Maximum
1/4 Ton (550 lb.)	80 80WFA	4	2-5/8 5	4-5/8 7
1/2 Ton (1100 lb.)	81 81WFA	4	2-5/8 5	4-5/8 7
1 Ton (2200 lb.)	82 82WFA 82WFB	5	3 5 7	5 7 9
1 Ton (2200 lb.)	82G 82GWFA 82GWFB	5	3 5 7	5 7 9
1 Ton (2200 lb.)	900382	Patented Track	3-1/4	3-1/4
1-1/2 Ton (3300 lb.)	79 79WFA 79WFB	6	3-3/8 6 8	6 8 10
1-1/2 Ton (3300 lb.)	79G 79GWFA 79GWFB	6	3-3/8 6 8	6 8 10
2 Ton (4400 lb.)	83 83WFA 83WFB	6	3-3/8 6 8	6 8 10
2 Ton (4400 lb.)	83G 83GWFA 83GWFB	6	3-3/8 6 8	6 8 10
2 Ton (4400 lb.)	900383	Patented Track	3-1/4	3-1/4

Spark Resistant models (identified by "SR" suffix on Catalog No.) also fit above beam sizes.

INSTALLATION

To make sure that both side plates are held tightly in place, it is important that all spacer washers that come with trolley be used on cross pin.

To assemble trolley place a sufficient number of washers on cross pin so that when the trolley is on the beam and one pair of wheels are tight against the beam flange, as illustrated in "WASHER ARRANGEMENT" drawing, there will be not less than 1/8" nor more than 1/4" clearance between the opposite pair of wheels and the beam flange. Place all remaining washers on the cross pin, outside of trolley side plates, and install slotted hex nuts. Due to variations in the thickness of spacer washers, it may be necessary to omit a washer from one or both outside ends of the cross pin in order to install cotter pins.

On patented track trolley Catalog Number 900382, start with one washer inside and nine outside on each side. On patented track trolley Catalog Number 900383, start with three washers inside and ten outside on each side.

Tighten nuts securely on cross pin and align cotter pin slots with cotter pin holes. Insert cotter pins. Before securing cotter pins, carefully load trolley with maximum load to be handled (not exceeding rated capacity), then remove load and recheck nuts to make certain they are tight. Cotter pins should now be spread open to secure them.

⚠ WARNING

If cotter pins do not engage slots of nuts after the nuts are firmly tightened against the washers, the nuts may loosen and cause excessive wheel clearance which may allow the trolley to separate from the I-beam and result in injury to operator and others, including danger to life and limb, and damages to load and other property.

⚠ WARNING

If trolley is mounted on an open-end beam, end stops must be installed to prevent trolley from running off the end of the beam resulting in injury to operator and others including danger to life and limb, and damages to load and other property.

(3) After hand chain is desired length, then insert ends of chain on open link. Make sure there is no twist in the chain.

(4) Place wrench on top part of link, tighten jaws and twist back until link is closed.

OPERATING PRECAUTIONS

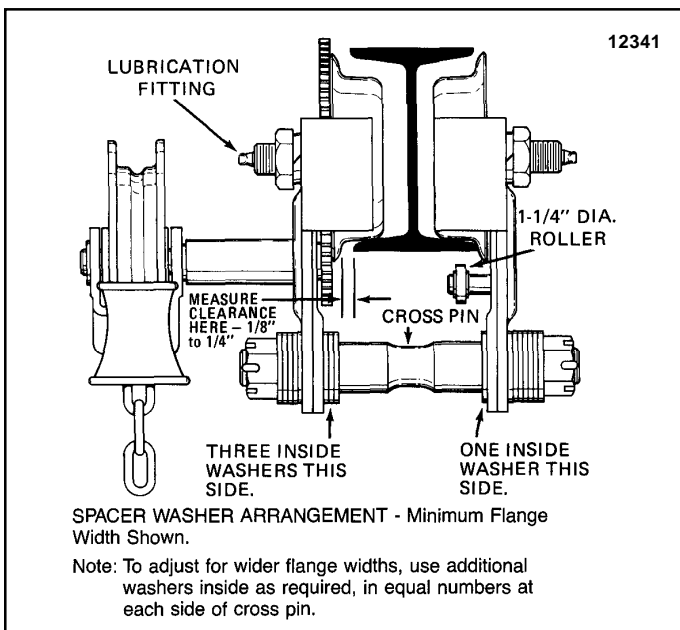

DO NOT load trolley beyond rated capacity.

DO NOT subject trolley to side loads. Always center trolley over load when hoisting.

DO NOT ram trolley into end stops, other trolleys, or any obstruction on beam. Improper and careless operation can result in a hazardous condition for operator and load.

ALWAYS be sure hoist suspension hook, clevis or hook adaptor is centered on cross pin, seated in recess on pin.

ALWAYS be sure load is clear of obstructions before traversing load and trolley.

⚠ WARNING

These trolleys are not designed nor intended to be used to support or transport people or for supporting or transporting loads over people.

INSPECTION AND MAINTENANCE

Inspect the trolley on a regular maintenance schedule. Check to make sure wheel axle nuts and cross pin nuts are tight and cotter pins are in place. Check gear teeth on drive wheels and pinion on hand geared trolleys for wear or damage. Check wheel tread surfaces for wear or damage. Check side plates for any evidence of overload or damage. Replace any worn or damaged parts using only factory approved replacement parts.

Lubricate wheel bearings thru pressure fittings in wheel axles with light grease.

REPLACEMENT PARTS

When ordering replacement parts, the trolley model number must be furnished with order. Order all replacement parts from an authorized BUDGIT Repair Station or from a BUDGIT Hoist Distributor. Do not order replacement parts from the factory.

INFORMATION CONTAINED HEREIN SUBJECT TO CHANGE WITHOUT NOTICE.

On hand geared trolleys two anti-tilt rollers are provided to allow trolley to fit the full specified range of I-beam sizes. Trolley is assembled with the small roller (1" dia.) which is suitable for Standard I-beam sizes from 10" up to the largest specified for the trolley. For I-beams smaller than 10", substitute the larger roller (1-1/4" dia.) by removing the outer roller retaining ring and replacing the smaller roller. For other than Standard I-beams measure the beam flange thickness and allow not less than 1/16" clearance between roller and bottom of beam flange.

HAND CHAIN LENGTH FOR HAND GEARED TROLLEYS

Trolley is furnished with 9'-6" hand chain drop. If hand chain is of improper length (chain should hang about 2'-6" above floor), modify its length as follows:

(1) Insert split connecting link in a vise so that three-quarters of link is above the top of vise jaws as shown in view A. (2) Place wrench on top part of link, tighten jaws, then twist link open wide enough to remove ends of hand chain from split link. See view B.

To enable us to expedite your parts order, always give Catalog Number, Model Number and Capacity, found on hoist nameplate.
